

Nippon trader presents a Business opportunity in manufacturing using a New Japanese Technology. You shall be using this Technology Transfer to develop a Throwing Type Fire Extinguisher.

We aim to offer a new Japanese technology that can be developed into a product (as explained below) and offer better option in fighting initial fires. We are authorized technology Partner of this fire extinguisher concept developed by Japanese company. Any body who wants to develop a similar product can contact us for the sole exclusive rights in India and other countries. (click on the following icon to play the video)

Proposed Fire Fighting Tool

- Lightweight
- Easy to handle
- Portable
- Anyone can use without instruction or training
- Safe to human body and environment
- Work sterically
- Affordable

Features of Proposed Product

- Unique plastic container is hard to break when squeezed but easily breaks when it hits something solid.
- Just throw it toward the fire origin.
- When the container breaks, the liquid inside is sprinkled and the heat from fire changes the liquid to the effective gas.
- The gas cuts off the supply of oxygen, and cools down the burning object.

The empty plastic Bottle will be supply by me. You will import as it is not available anywhere else yet, as it uses special plastic that works as a glass, It brakes like a glass bottle Huzai fa (Nippon Trader)

{youtubegalleryid=1}

This a first revolutionary throw-type fire extinguisher technology developed and designed to help rescue vulnerable people especially children, the elderly and the disabled from fires. With the latest research and development, we have improved that the product developed with our technical concept, offers to cater for various needs and markets ranging from household, commercial and industrial use.
